

## Deep vision

### Who We Are

At **DeepVision.ai**, we're building next-gen AI products that transform businesses. Our expertise spans [Computer Vision](#), [NLP](#), [Cloud AI](#) and [Automation](#).

We don't just deliver solutions, we create **scalable ecosystems** that prepare enterprises for the digital shift ahead. Who We Are

At DeepVision.ai, we're building next-gen AI products that transform businesses. Our expertise spans Computer Vision, NLP, Cloud AI and Automation.

We don't just deliver solutions; we create scalable ecosystems that prepare enterprises for the digital shift ahead.

Question :Which services offered by deep vision?

- Answer: Computer Vision
- Chat Bot Assistant
- n8n Automation
- Face Recognition
- Pose Estimation
- Object Detection & Tracking
- Image Segmentation
- Visual Search
- Natural Language Processing
- Text Analysis
- Sentiment Analysis
- Document OCR & Extraction
- Data & Cloud
- Big Data Analytics
- Data Integration & Pipelines
- Cloud Deployment & MLOps
- Custom Software
- Web Applications
- Mobile Apps
- API Development

## Active Boot camp Programs

- Intensive, hands-on programs taught live by Pakistan's leading AI practitioner

Is there any active bootcamp program ?

### Active Bootcamp Programs

Intensive, hands-on programs taught live by Pakistan's leading AI practitioner.

### Course Preview

Advanced Computer Vision & Neural Systems preview

Advanced Computer Vision & Neural Systems

Question:What You'll Build?

Answer:Build custom object detection pipelines

Deploy models on edge hardware

Accelerate inference up to 10× with TensorRT

Syed Karar Haider Bukhari

Lead Instructor

Syed Karar Haider Bukhari

## Main components

### STEREO CAMERA

Takes photos of all fish entering the trawl.

### ECHO SOUNDER

Combining Echo sound- and image data provides deeper knowledge of type, size, and volume

### ANALYSIS SOFTWARE

Optimizes images from challenging conditions and analyzes species, size, and location of fish.

### ACOUSTIC LINK

Transfers statistical data about the catch to the vessel in real-time.

#### **CATCH OR RELEASE UNIT**

Catches biological samples. The rest of the fish swim back into the sea. (To be further developed)

## **F.A.Q.**

A subsea unit with stereo camera, lights and batteries attaches to the trawl with a marine zipper. The camera takes photos of all the fish that swim into the cod-end of the trawl, whether the cod-end is open or closed. Once onboard the vessel, the images are uploaded to the computer and analysed in the Deep Vision software. The images have information about time, location and depth and can be further analysed for species and size.

## F.A.Q.

Deep Vision makes it possible to do your fish sampling and resource mapping without bringing the fish onboard the vessel. This will make your research more sustainable and save valuable marine resources in the process. Sampling will be more efficiently as it can be done on a computer instead of on deck. For biological samples you can use the Deep Vision sorting device to catch a selection of fish. Data about the fish will also be more accurate as the precise location is given. Fish that is otherwise squashed in the trawl, such as jellyfish, can also be sampled from the images.
