

Profile of Syed Karar Haider Bukhari

Syed Karar Haider Bukhari is a distinguished Pakistani technology entrepreneur, Artificial Intelligence professional, researcher, and educator whose career reflects a strong commitment to technological innovation and the advancement of AI in Pakistan. He is the **Founder and CEO of DeepVision.ai**, an AI and computer vision company established in 2019 with the vision of transforming complex real-world challenges into intelligent, technology-driven solutions. With expertise spanning **Artificial Intelligence, Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, and Generative AI**, he has positioned himself at the intersection of advanced research, entrepreneurship, and practical technological development.

Mr. Haider Bukhari holds an **MS in Computer Science from FAST-NUCES Islamabad** and has built professional experience in areas including AI/ML engineering, data science, research, and education. Beyond his technical and entrepreneurial pursuits, he has actively contributed to the development of young professionals by engaging with students, delivering lectures and training sessions, and sharing practical knowledge about emerging technologies. His approach demonstrates that technological progress is not only about developing sophisticated systems, but also about **empowering people with the knowledge and skills required to build the future**.

Through his leadership at DeepVision.ai and his involvement in education and AI innovation, Syed Karar Haider Bukhari represents the potential of Pakistan's growing technology ecosystem. His journey serves as an inspiration for students and aspiring entrepreneurs who seek to transform ideas into meaningful technological solutions. His work highlights the importance of **vision, continuous learning, research, innovation, and leadership** in an era where Artificial Intelligence is reshaping industries and societies worldwide. His contribution demonstrates how Pakistani talent can participate in the global AI revolution while simultaneously creating opportunities for local innovation and human development.

Company Overview

DeepVision.ai builds next-gen AI products to transform businesses. The company specializes in Computer Vision, Natural Language Processing (NLP), Cloud AI, and Automation, delivering scalable ecosystems that prepare enterprises for digital transformation.

Services Offered

- **Computer Vision:** Face Recognition, Pose Estimation, Object Detection & Tracking, Image Segmentation, Visual Search.
- **Natural Language Processing (NLP):** Text Analysis, Sentiment Analysis, Document OCR & Extraction.
- **Data & Cloud:** Big Data Analytics, Data Integration & Pipelines, Cloud Deployment & MLOps.
- **Custom Software:** Web Applications, Mobile Apps, API Development, Chat Bot Assistant, n8n Automation.

Active Bootcamp Programs

DeepVision offers intensive, hands-on live training programs taught by leading AI practitioners in Pakistan.

- **Course:** Advanced Computer Vision & Neural Systems
- **Lead Instructor:** Syed Karar Haider Bukhari
- **Skills Offered:** Building custom object detection pipelines, deploying models on edge hardware, accelerating inference up to 10 xs with TensorRT.

Deep Vision Marine Systems (Subsea Sampling Technology)

Deep Vision provides a subsea system attached to a trawl via a marine zipper to conduct fish sampling and resource mapping without bringing fish onboard the vessel. This increases research sustainability, efficiency, location accuracy, and allows sampling of soft species like jellyfish.

Hardware & Software Components:

- **Stereo Camera:** Captures images of all fish entering the trawl (whether the cod-end is open or closed).
- **Echo Sounder:** Combines acoustic sound and image data to assess fish species, size, and volume.
- **Analysis Software:** Optimizes images under challenging conditions and analyzes fish species, size, depth, time, and precise location onboard.
- **Acoustic Link:** Transfers real-time statistical data about the catch directly to the vessel.
- **Catch or Release Unit:** Catches specific biological samples while allowing remaining fish to return to the sea.

Recommended n8n RAG & Qdrant Configuration Settings

- **Document Loader / Splitter (in n8n):**
 - **Chunk Size:** 400–600 tokens (or characters equivalent).
 - **Chunk Overlap:** 50–100 tokens. This prevents context loss between section transitions (e.g., between general AI services and marine hardware).
- **Metadata to Add in Qdrant Payload:**

Attach metadata to your Qdrant payload during upsert to enable metadata filtering in n8n:

- category: "company info", "services", "boot camp", or "marine hardware"
 - source: "Deep vision.pdf"
- **Embedding Model Recommendation:**

Use models like text-embedding-3-small (OpenAI) or bge-small-en-v1.5 with **Cosine Similarity** metric in Qdrant.

DeepVision.ai

1. Privacy Policy

DeepVision.ai is committed to protecting the privacy and confidentiality of its students, interns, employees, clients, and business partners. Personal information, academic records, employment information, project data, credentials, and company documents must be handled responsibly and only used for legitimate educational, professional, or business purposes.

All interns, students, and employees are expected to maintain strict confidentiality regarding company projects, source code, client information, datasets, business strategies, passwords, and internal communications. No confidential information may be shared publicly or with unauthorized individuals without written permission from management.

Employees and interns must use company systems, accounts, and data responsibly and follow applicable cybersecurity and data-protection requirements. Any suspected data breach, unauthorized access, or loss of confidential information should immediately be reported to management or the relevant supervisor.

2. Student / Intern Leave Policy

DeepVision.ai encourages students and interns to maintain regular attendance and professional discipline while balancing their academic responsibilities.

Leave Guidelines

- Interns should inform their supervisor before taking leave whenever possible.
- Leave should preferably be requested at least one working day in advance.
- Emergency leave may be communicated as soon as reasonably possible.
- Frequent or unexplained absence may affect internship evaluation and completion certification.
- Academic examinations, university activities, or genuine emergencies may be considered valid reasons for leave.
- Interns are expected to complete assigned work and meet project deadlines despite approved leave.
- Extended leave may require approval from the relevant Team Lead, HR, or management.

Internship Timing

Standard Internship Hours:
10:00 AM – 6:00 PM

Working Days: Monday to Friday

Interns may be assigned flexible schedules depending on their university timetable, project requirements, or department. DeepVision.ai has also publicly advertised internship/training opportunities and emphasizes practical projects, mentorship, and industry exposure.

3. Employee Leave Policy

DeepVision.ai aims to maintain a professional yet supportive workplace where employees can manage personal, family, health, and professional responsibilities while ensuring continuity of business operations.

Types of Leave

Annual Leave

Employees may request annual leave for personal activities, vacations, or other planned matters. Requests should be submitted in advance and approved by the reporting manager.

Sick Leave

Employees who are unable to work due to illness should inform their supervisor or HR as early as possible. Supporting documentation may be requested for extended periods of absence.

Emergency Leave

Emergency leave may be granted for unexpected personal or family circumstances. Employees should notify their supervisor immediately whenever possible.

Casual Leave

Short-term leave may be requested for personal matters. Approval depends on operational requirements and the employee's available leave balance.

Leave Approval

- Planned leave should normally be requested at least 2–3 working days in advance.
- Longer leave should be requested as early as possible.
- Emergency leave should be reported immediately.
- Leave is subject to approval by the employee's reporting manager/HR.
- Employees should ensure that important tasks are completed or properly handed over before taking planned leave.

- Unauthorized or unexplained absence may result in disciplinary action in accordance with company rules.

4. Employee Working Hours

Standard Office Timing

Working Hours: 10:00 AM – 6:00 PM

Working Days: Monday to Friday

Employees are expected to report on time, maintain professional attendance, and remain available during their scheduled working hours.

Depending on the nature of a project, client requirements, team responsibilities, or management approval, working hours may be adjusted.

Attendance & Punctuality

Employees and interns are expected to:

- Arrive on time.
- Complete the required working hours.
- Inform their supervisor about delays or absence.
- Attend scheduled meetings and project discussions.
- Maintain professional communication with colleagues and clients.
- Complete assigned responsibilities within agreed deadlines.

5. Professional Conduct

All employees and interns are expected to maintain a respectful, inclusive, and professional environment. Harassment, discrimination, bullying, misuse of company resources, unauthorized disclosure of confidential information, and unethical professional conduct are not acceptable.

Employees and interns should represent DeepVision.ai professionally when communicating with clients, universities, partners, students, and other members of the technology community.

6. Internship & Employee Development

DeepVision.ai places emphasis on practical learning, professional development, mentorship, and exposure to emerging technologies. Its public communications describe internship opportunities as a way for students to gain real-world industry experience, professional skills, mentorship, and exposure to emerging technologies.

The company also promotes areas such as Artificial Intelligence, Machine Learning, Deep Learning, NLP, Generative AI, and AI-powered automation, providing opportunities for interns and employees to develop skills relevant to the modern technology industry.

7. Management & Policy Authority

These policies are intended to establish clear professional guidelines for students, interns, and employees. Management reserves the right to modify working hours, leave procedures, internship schedules, and other workplace policies according to organizational requirements and applicable employment regulations.

All employees and interns are expected to remain informed about updated company policies and comply with instructions issued by management or HR.
